

# Impact areas to consider

Note: Some of these topics are very specific to the Accept360 product and its features. Those I've marked in italics.

*Table views and filters*

*Requirement hierarchy (if requirement-related)*

*Print view*

Dashboard

Related history table entries

Custom properties

Default values and settings; can they be configured?

Permission settings

Related Studio settings and configuration options

## Relationships

*Multi-actions (i.e., the Actions menu in Requirements and Roadmaps modules, and table views)*

*Impact on resource demand estimates and rollups*

*Implications for quantitative analysis (i.e., the Analysis module)*

## Instrumentation

Terminology and lexicon - what terms will be used for the new capabilities?

Best practices for using the capability (also warnings)

Scalability and performance implications and expectations

Implications for ad hoc reporting

Implications for built-in reporting

Implications for baselines and revisions

Import/Export implications

API

*HTML Suggestions interface*

*Integration with Ideas product*

Training and change of process impact

Notifications

Upgrade and backward compatibility

Warnings
